

Lake District

This urban intervention explores a possible relationship between commercial development and landscape remediation, two essential elements of future change in Syracuse. In combination, they become the catalyst for change in the underused and polluted area between the interstates and adjacent to lake Onondaga, and are contingent on one another's success. A pedestrian esplanade, canal expansion, industry corridor and a dispersal of Destiny USA are fundamentals of the plan, designed to be phased over 20 years.

6, 10-13 < Ericka Temple

willows

stabilize canal shore

quickly restore toxin level of shore

reinvigorate soil to allow for other specie growth

supply destiny with energy

branches are harvested every 2-3 years and biomass can be converted into energy

roots remain in soil after harvest so stumps will continue to produce new shoots
